

# Tremco Ontario Projects Have A Record Of Achievement

## North American Publication Reviews Ontario Schools

## St. Christopher School Wins National Awards

In his article "Energy Efficient Sustainable Schools in Canada South", Architect Joe Passa reviews four school projects in Ontario. While the article was written to outline all aspects of these buildings from an architectural standpoint, they all have one thing in common: Tremco roofs.

*"Amongst all the sustainable design, the most visible aspect of a green building leaving the greatest impact on those who visit is the green roof. The soil is specially designed with a binder so it will not blow off of the roof. The green roof acts as a bio-filter for air pollution and it helps reduce noise transmission into the building"*

Building Life. Managed.
